PREFACE TO THIRD EDITION

This book is a third edition of checklist of the Mammals of Indonesia. The new edition provides remarkable information in several ways compare to the first and second editions, the remarks column contain the abbreviation of the specific island distributions, synonym and specific location. Thus, in this edition we are also corrected the distribution of some species including some new additional species in accordance with the discovery of new species in Indonesia. In addition, we also provided information of domestic and introduced species, local names, common names, and recent revision on taxonomic status. Meanwhile, relate to the conservation status is referred to Indonesian Regulation of The Decree of Ministry of Environment and Forestry No. 106/MENLHK/SETJEN/KUM.1/12/2018, CITES (2019) and The IUCN Red List of Threatened Species (2019).

The number of species for this third edition have increased, up to date this book provides the number of 773 mammal species from Indonesia comparing to 681 species in the original (1998) and 701 species in the second edition (2002). We added nearly 10% of mammal species in this current checklist since the last edition published.

Finally, the authors have called out for suggestions, comments, corrections and additions are much appreciated.

Bogor, December 2019
The authors

FOREWORD
DIRECTOR OF RESEARCH CENTER FOR BIOLOGY,
INDONESIAN INSTITUTE OF SCIENCES (LIPI)

Indonesia is situated in transition zone between oriental and australian fauna. Because of its location, natural resources, and species richness with its reputation as being living laboratory, Indonesia have long fascinated to biologists. Considerable variation has been observed among island of Indonesia, as is attested to by the number of species and subspecies which have been described in the region. Given these findings, the number of species in this book has been changed considerable. First edition (1998) provided 681 species of Indonesian mammals, 701 species in the second edition (2002) and now in the third edition (2019) provides 773 species .

With information from thoroughly study of many literatures, this checklist provides timely and valuable information of Indonesian mammals and their conservation status under Indonesian law and IUCN Red List of Threatened Species and CITES classification, as well as English name and Indonesian name.

This checklist is the contribution of Research Center for Biology-LIPI in order to inform the latest biodiversity of Indonesian mammals and expected as a reference for the readers who are interested in the field of mammals. This checklist also has provided important insight into the taxonomic status of Indonesian mammals.

INTRODUCTION TO INDONESIAN MAMMALS

Indonesian archipelago has a unique mammalian fauna, especially on species richness and high level of endemism (Maryanto and Higashi 2011). Furthermore, the high level of endemism is not only implemented into some mammal species with the low ability of migration within islands, it is also known from some of the mammal species with the capacity related to migration, adaptation, colonization and speciation such as crossing over the mountains, hills, rivers or moving across islands, especially for volant species.

Currently, the zoogeography of the mammal distribution mostly influenced by the Asian and Australian elements, of which those distribution patterns following the common zoogeographical boundaries in the Oriental and Australian region, and some of the traditional ones are referring to Wallace's, Lydekker's and Weber's lines (Kitchener *et al.* 1995ab). Additionally, some of the zoogeographic distribution pattern also referring to the other zoogeographic distribution pattern in Indonesia, especially for the bats and rat species (Maryanto and Higashi 2011). The combination amongst zoogeographic boundaries, non anthropogenic factor for mammal species, and the uniqueness of ancient geotectonic dynamic from those area, especially the islands that located in the east of Wallace's line which were historically influenced by some factors such as microclimate, elevational distribution, habitat types and food resources causing the islands in Indonesia archipelago have high level of endemism for fauna species.

In order to inventory the number of mammal species from each island in Indonesia, MacArthur and Wilson (1967) stated that the equilibrium number of species found in the island was associated with the area and the isolation level of the island. The discovery of new species was inconcordance with the rate of extinction of island species. Furthermore, those number of species in small islands especially for satellite or remote islands that surrounding the main island such as Sumatra, Borneo, Jawa, Sulawesi, and Papua New Guinea also influenced by the distance and the deep sea level of these satellite islands from the mainland. In addition, existence of the volcanic mountain in those satellite island also important related to the species diversity.

Suyanto *et al.* (2002) reported that the number of distributed mammal species in Indonesia are 701 species, and after more than 15 years, an update information is needed. This book is written to addressed the update information of mammal species number and its distribution throughout Indonesia, including the revision of some mammal species, and the new distributional record. In this edition, we record that Indonesian mammals consist of 773 species. The additional species are recorded from the new discoveries, revision of some mammal species and new distributional record resulted from recent expedition conducted by some scientists from Museum Zoologicum Bogoriense in collaboration with the experts from both Indonesian and overseas institutions. The new information of the species number from many ecosystems types, area of an islands are needed, especially in terms of the current rank of the hot spot for conservation area, biodiversity and habitat loss, and also to prioritize the conservation management efforts. Myers *et al.* (2000) and Ovadia (2003) suggested that originally, five factors were used to classify the hotspot area, they are: (1) number of endemic plants, (2) number of endemic vertebrate, (3) species-area ratio of endemic plants, (4) species-area ratio of endemic vertebrate, and (5) habitat loss.

Here we calculate the percentage of species endemism from major islands in Indonesia, those are Sumatra, Kalimantan, Jawa, Sulawesi, Lesser Sunda, Moluccas and Papua. The highest major island endemism is Papua (49.2%), followed by Sulawesi (48.3%), Kalimantan (20.4%), Moluccas (16.9%), Sumatra (15.8%), Jawa (14.1%), and Lesser Sunda (11.7) (Table 1).

Comparing the increasing number of Mammal Species in Indonesia and its endemism level to the previous data by Suyanto *et al.* (1998, 2002), and Widjaja *et al.* (2014) are not in the similar pattern to the land degradation and environmental disturbances. This condition also deteriorated by increasing the total number of the threatened species base on IUCN, CITES and Protected species in Indonesia law. The total species on

Checklist of The Mammals of Indonesia

CITES Appendix I is increase into 56 species, endangered species based on IUCN Redlist species is 56 species, and Protected Species of Indonesia Law is 137 species (Table 2).

We hope this book, which published since 1st edition in 1998, is to promote biodiversity and conservation of Indonesian mammals, as well as to increase public awareness of relationship between changes in both nature and climate to Indonesian mammals diversity. We regret any error made in this checklist and will be pleased to make necessary correction in the future edition.

Table 1. Total species and endemicity based on Indonesian major islands distribution

Major islands groups	Total Species	Endemic	Endemicity %
Sumatra	280	57	15.8
Kalimantan	285	45	20.4
Jawa	206	29	14.1
Lesser Sunda	137	16	11.7
Sulawesi	230	111	48,3
Mollucas	160	27	16,9
Papua (Indonesia)	250	123	49.2

Checklist of The Mammals of Indonesia

INDEX SCIENTIFIC NAME

- A. porcinus*, 509
Acerodon celebensis, 119
Acerodon humilis, 120
Acerodon mackloti, 121
Acrobatidae, 75
Aeromys tephromelas, 559
Aeromys thomasi, 560
Aethalops aleo, 122
Ailurops melanotis, 28
Ailurops ursinus, 29
Amblyonyx cinereus, 423
Anisomys imitator, 579
Anoa depressicornis, 518
Anoa quarlesi, 519
Antechinus habbema, 5
Antechinus melanurus, 6
Antechinus naso, 7
Antechinus wilhelmina, 8
Aonyx cinereus, 423
Aproteles bulmerae, 123
Arctictis binturong, 433
Arctogalidia trivirgata, 434
Arctonyx collaris, 424
Arctonyx hoevenii, 424
Arielulus circumdatus, 291
Arielulus cuprosus, 292
ARTIODACTYLA, 497
Aselliscus tricuspidatus, 237
Austronomus kuboriensis, 357
Axis axis, 508
Axis kuhlii, 509
B. banteng, 515
B. indicus, 516
B. menadensis, 125
B. primigenius, 516
B. seimundi, 124
Babyrousa babyrussa, 497
Babyrousa bolabatuensis, 498
Babyrousa celebensis, 499
Babyrousa togeanensis, 500
Baiyankamys habbema, 750
Balaenoptera acutorostrata, 457
Balaenoptera bonaerensis, 458
Balaenoptera borealis, 459
Balaenoptera edeni, 460
Balaenoptera musculus, 461
Balaenoptera omurai, 462
Balaenoptera physalus, 463
Balaenopteridae, 457
Balionycteris maculata, 124
Bandicota bengalensis, 580
Bandicota indica, 581
Berylmys bowersi, 582
Boneia bidens, 125
Bos bubalis, 517
Bos javanicus, 515
Bos taurus, 516
Bovidae, 515
Brassomys albidens, 598
Bubalus bubalis, 517
Bubalus depressicornis, 518
Bubalus quarlesi, 519
Bunomys andrewsi, 583
Bunomys chrysocomus, 584
Bunomys coelestis, 585
Bunomys fratrorum, 586
Bunomys heinrichi, 587
Bunomys karokophilus, 588
Bunomys naso, 683
Bunomys penitus, 589
Bunomys prolatus, 590
Bunomys torajae, 591
Burramyidae, 61
C. aegagrus, 520
C. albiculus, 525
C. angulatus, 132
C. bernsteini, 238
C. macklotii, 94
C. major, 133
C. malayana, 82
C. minuta, 91
C. penicillatus, 592
C. sumatrana, 79
C. terminus, 133
C. tumulus, 126
C. villosa, 88
C. weberi, 82
Callosciurus adamsoni, 524
Callosciurus albescens, 525
Callosciurus baluensis, 526
Callosciurus melanogaster, 527
Callosciurus nigrovittatus, 528
Callosciurus notatus, 529
Callosciurus orestes, 530
Callosciurus prevostii, 531
Callosciurus rubriventer, 552
Callosciurus simus, 535
Canidae, 420
Canis lupus familiaris, 420
Capra hircus, 520
